***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 17 & 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Pappas et al US Patent 5,824,096.

Pappas et al discloses a prosthetic knee (100) comprising a femoral component (200) having a hinge post (207), a hinge post extension (302), a tibial component (500), a hinge post extension aperture (503), whereby the femoral component is rotatable about the longitudinal axis of the hinge post extension (see col. 6, lines 17-27). A meniscal component (400), a condylar bearing surface (203), a condylar bearing surface (203) and a cooperative bearing surface (407).

Claims 19 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Bosredon US Patent 6,117,175.

Bosredon discloses a prosthetic femoral component comprising a femoral component body (1), a hinge post (23) rotatably connected to said femoral component body, a bearing box (14) connected to the femoral component body, the bearing box interposed between the hinge post and the femoral component body and a hyperextension stop (end of element 14, close to element structure 19, see Fig. 2).

***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection

Art Unit: 3738

is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 17-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 12-14, 18 and 22 of U.S. Patent No. 6,485,519

B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because both cases disclose a prosthetic knee having a femoral component, a hinge post, a hinge post extension, a tibial component including a hinge post extension aperture, a meniscal component and a hyperextension stop and a hyperextension stop surface.

Claims 17-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 2, 4, 5, 7, 8, 10, 11, 14, 15, 23 and 24 of U.S. Patent No. 6,719,800 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because both cases disclose a prosthetic knee having a femoral component, a hinge post, a hinge post extension, a tibial component including a hinge post extension aperture, a meniscal component and a hyperextension stop and a hyperextension stop surface.
